CAVEX

CAVEXTM Cream Alginate

Designed to mimic the quality of silicone, Bubble gum scent

- 👍 High Detail: Captures details down to 5 μm , surpassing standard alginate benchmarks.
- 👍 A 5-year shelf life ensures long-term reliability for your practice.
- 👍 Exceptional Strength: High tear resistance and elasticity prevent the material from breaking during removal.
- 👍 Scannability: Optimized for digital workflows; impressions can be scanned without reflective issues.

+254 706 505 693

CAVEXTM Alginate Container

Keeps powder fresh and ensure precise measurements.

- 👍 **Airtight Seal:** Keeps moisture and light out to prevent powder spoilage.
- 👍 **Large enough** to hold one standard 500g bag of alginate.
- 👍 **One-Hand Operation:** Features a spring-lift lid that opens easily during procedures.
- 👍 **Clean Handling:** Built-in scoop with an extra-long handle keeps your hands free of powder.

CAVEXTM Water Dosing Bottle

Water measuring bottle for alginate

- 👍 **Constant Temperature:** Helps keep water at a stable room temperature for consistent set times.
- 👍 **Fast:** Speeds up prep time compared to using a tap or syringe.
- 👍 **Zero Error:** Eliminates measuring mistakes common with standard cups.
- 👍 **Easy to Use:** A light squeeze fills the built-in reservoir to the exact "one-scoop" mark.

Prestige Putty Soft

Extra-soft, fast-setting A-Silicone for high-precision first impressions

-  Extra Soft handling: Provides high comfort during the working phase and easy removal from the mouth.
-  Flows well under pressure but stays stable when not loaded.
-  High Dimensional Stability: Maintains accurate shape for up to 24 hours with <0.2% variation.
-  Hydro-compatible: Works effectively in a moist oral environment for detailed reproduction.

Get Yours Today! @

Ksh 9,000

Prestige Light

Low-viscosity "wash" material used with Prestige Putty for detailed impressions.

-  **Hydrophilic:** Flows into wet areas to capture fine margins and gingival detail.
-  **Elastic Recovery:** Returns to its exact shape after removal (>99.5%).
-  **Thixotropic:** Stays on the tooth without dripping; flows only under pressure.
-  **High Tear Strength:** Resists ripping when removed from deep undercuts.

Ksh 6,500

 Cromatic

Chromatic alginate used for high-precision dental impressions

-  Fast Setting: Reduces patient discomfort with a quick intraoral set time.
-  Formulated to prevent fine particles from becoming airborne.
-  High Elasticity: Allows for easy removal from the mouth without tearing.
-  Thixotropic: Stays on the tray and flows only under pressure to capture fine details.

RESTORATIVES

Light-cured, Composite Resin for Masking

- 👍 Uses rounded zirconia and nano-fillers for high gloss and superior wear resistance.
- 👍 Low shrinkage and high strength for both front and back tooth repairs.
- 👍 Has a flexural strength of **185 MPa** and a hardness of 64 HK.
- 👍 "Body" shades blend naturally with surrounding teeth, often eliminating the need for complex layering.

Opalescence PFTM 10%

Tooth whitening gels

- 👍 Active Ingredient: 10% Carbamide Peroxide (equivalent to ~3% hydrogen peroxide).
- 👍 Benefits: PF formula (Potassium nitrate and Fluoride) strengthens enamel, reduces sensitivity, and protects against caries.
- 👍 Available in Mint and Melon flavours
- 👍 Wear Time: Designed to be worn for 4-6 hours or overnight, making it ideal for sleeping.

info@transafricamedical.co.ke

+254 706 505 693

Opalescence PFTM 35%

Tooth whitening gels

- 👍 **High Potency:** Formulated with 35% carbamide peroxide, this gel can whiten teeth by up to 10 shades in just 7 days.
- 👍 **Enamel Protection (PF Formula)** has potassium nitrate to reduce sensitivity and fluoride to strengthen enamel and prevent cavities.
- 👍 **Designed for short-term use**, requiring **30–60** minutes daily
- 👍 **Features 20% water content** to prevent tooth dehydration and shade relapse, prolonging whitening results.

info@transafricamedical.co.ke

+254 706 505 693

Opalescence Boost™ 40%

Professional, in-office whitening system

- 👍 Potency: The 40% concentration is one of the strongest available for rapid results.
- 👍 Comfort: The gel contains potassium nitrate and fluoride, which help reduce sensitivity and strengthen enamel during the process.
- 👍 The 40% H₂O₂ gel is applied in a 1 mm layer for 20 minutes.
- 👍 Freshness is ensured with a syringe-to-syringe mixing system, activating chemistry just before use.

Get Yours Today! @ **Ksh 11,000**

info@transafricamedical.co.ke

+254 706 505 693

Opalustre™

Chemical and Mechanical Abrasion Slurry

- 👍 Uses 6.6% hydrochloric acid to chemically dissolve stains and silicon carbide micro-particles for mechanical removal.
- 👍 Removes only a minimal layer of enamel (approx. 0.1mm), making it a safer alternative to veneers or crowns for surface defects.
- 👍 Thick, water-soluble paste stays in place without splashing.
- 👍 Visible Progress: The slurry changes color slightly as it works, helping the clinician monitor the process.

+254 706 505 693

Ultra™ Etch

35% phosphoric acid etchant, full kit

- 👍 Cost Savings: Bulk purchasing significantly lowers the price per procedure.
- 👍 Reduced Waste: You only fill exactly what you need into the smaller syringes.
- 👍 Residue-Free: Rinses away completely with water spray.
- 👍 Sustainability: Reduces plastic waste compared to buying dozens of pre-filled units.

Get Yours Today! @ **Ksh 11,000**

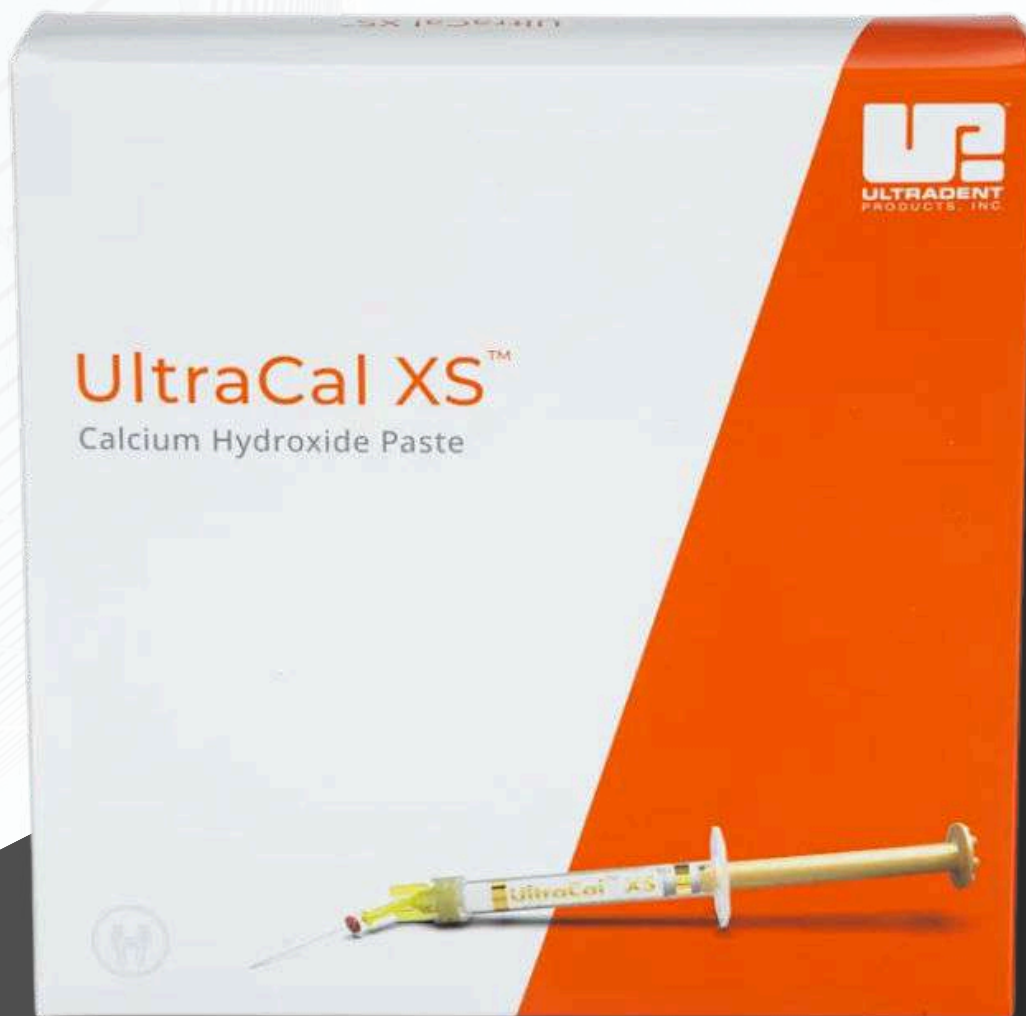

UltraTM Etch

35% phosphoric acid etchant, Refill

- 👍 Self-Limiting: Averages a 1.9 μm etch depth in 15 seconds, preventing over-etching on dentin.
- 👍 Viscosity: Thixotropic gel that stays put on vertical surfaces but flows into tiny fissures.
- 👍 Residue-Free: Rinses away completely with water spray.
- 👍 Visibility: Distinctive dark blue color makes it easy to see placement and ensures complete rinsing.

Get Yours Today! @ **Ksh 8,500**

UltraCal™ XS

Chemical and Mechanical Abrasion Slurry

- 👍 Radiopaque: Easily visible on X-rays to check for full canal coverage.
- 👍 Extra-Smooth: The paste is thin enough to flow through a 29ga NaviTip™.
- 👍 Aqueous Formula: High pH (12.5) for potent antibacterial action
- 👍 Self-Limiting: Will not set or harden inside the canal, making removal easy.

+254 706 505 693

Composite Wetting ResinTM

45% filled, light-cured, liquid resin

- 👍 Improves Glide: Lubricates instruments and brushes to prevent composite "tug-back" or sticking during sculpting.
- 👍 Enhances Adaptation: Facilitates seamless blending of composite into cavity preparations and between increments.
- 👍 Restores moisture to contaminated or dry layers.
- 👍 Solvent-Free: Does not contain alcohols or acetones that could weaken the material or interfere with polymerization.

Ksh 6,200

info@transafricamedical.co.ke

+254 706 505 693

Porcelain acid EtchantTM

Prepare ceramic surfaces for high-strength bonding

- 👍 Silane Pairing: Most effective when followed by a silane coupling agent to create a chemical bridge between porcelain and resin.
- 👍 Micro-Roughening: Creates microscopic pores by selectively dissolving the glass phase of the porcelain.
- 👍 Increases surface area to improve mechanical bonding with resin.
- 👍 Gel Form: Usually colored (e.g., yellow) and viscous to ensure precise placement and visibility.

20 Tips

ViscoStat™ Clear dento infusor kit

25% Aluminum Chloride

- 👍 Clear, non-staining gel: Leaves no residue and rinses off effortlessly to maintain enamel and soft tissue aesthetics.
- 👍 Gel stays in place without running—enabling precise application even on inclined surfaces.
- 👍 Does not impair resin adhesion or impression accuracy.
- 👍 Leaves no residue and rinses off effortlessly to maintain enamel and soft tissue aesthetics.

Get Yours Today! @

Ksh 2,500

20% ferric sulfate hemostatic gel for blood control

- 👍 **Visibility:** Deep brown color makes it easy to see where the material is applied and when it has been fully rinsed away.
- 👍 **Viscous Gel:** Unlike liquids, the gel stays exactly where you place it and won't run onto other teeth.
- 👍 **Formulated to be gentle on hard and soft tissues.**
- 👍 **Instant Hemostasis:** Stops bleeding in seconds by forming "coagulum plugs" in the capillary ends.

info@transafricamedical.co.ke

+254 706 505 693

TM

Green Stick Compound

Thermoplastic material for border molding of custom impression trays

- 👍 Low Heat: Softens at a lower temperature than red cakes (approx. 50°C / 122°F).
- 👍 Stays thick and "stays put" on the tray edge without running.
- 👍 Fast Set: Hardens quickly in the mouth once it cools, capturing muscle movements.
- 👍 Add-On: Can be added in layers; new material bonds easily to previously hardened compound.

Get Yours Today! @

Ksh 1,800

+254 706 505 693

Miratray Spray

Alginate Tray spray Adhesive, 200ml

- 👍 Prevents Distortion: Stops the alginate from pulling away from the tray during removal.
- 👍 Works with all brands of alginate (including Cavex Cream).
- 👍 Easy Application: Simple aerosol spray provides an even, thin coating.
- 👍 Quick Drying: Takes only about 90 seconds to become tacky and ready for use.

Get Yours Today! @

Ksh 1,300

info@transafricamedical.co.ke

+254 706 505 693

Impression trays

Perforated, plastic Disposable, Edentulous, stainless steel

- 👍 Shallow Flanges: Low borders prevent over-extension into soft tissues.
- 👍 Anatomic Contour: Follows the natural curve of the gums.
- 👍 Oval Profile: Smooth, rounded base matches the shape of a toothless ridge.
- 👍 Rigid Construction: Prevents tray flexing to ensure a high-suction fit.

+254 706 505 693

'GC.' Fuji I

World's first chemically cured glass ionomer luting cement.

- 👍 Chemical Bond: Bonds directly to tooth structure and metal for excellent marginal seal.
- 👍 High safety profile with low risk of post-operative sensitivity.
- 👍 Moisture Tolerant: Unlike resin cements, it performs well even in a slightly moist environment.
- 👍 Thin Film: Low film thickness (20 μ m) ensures a perfect, "passive" fit for crowns.

Get Yours Today! @

Ksh 5,000

'GC.' Fuji IX GP

High-viscosity, packable glass ionomer posterior restorative

-  Packable Consistency: Thick, non-sticky texture that can be condensed like amalgam.
-  High Wear Resistance: Strong enough for use in posterior teeth.
-  Chemical Bond: Bonds directly to enamel and dentin without etching or bonding agents.
-  Fluoride Release: High levels of fluoride release to prevent secondary cavities.

info@transafricamedical.co.ke

+254 706 505 693

For Sensitive surfaces

- 👍 Quick-acting disinfection effect
- 👍 Certified material compatibility – recommended by leading equipment manufacturers
- 👍 Ideal for treatment units in combination with FD 360 Cleaning and care of vinyl upholstery
- 👍 Alcohol-reduced ready-to-use solution

Get Yours Today! @ **Ksh 8,000**

RubyBond™ Adhesive System – 5ml

A light-curing bonding agent for adhesive restorations.

-  **Universal Compatibility:** Works with all composite materials.
-  **High Strength:** Provides strong adhesion to both enamel and dentin.
-  **Elastic Connection:** Accommodates natural tooth movement to prevent bond failure.

Get Yours Today! @ **Ksh 1,500**

Perfection PlusTM RootPLUS

Zinc oxide eugenol root canal sealant for use with obturation points.

-  Radiopaque: Clearly visible on X-rays to verify successful sealing.
-  Film Thickness: Very low (approx. 6 μ m), which ensures a precise fit within the canal
-  Working Time: Offers a long working time on the pad (10–25 minutes) for careful application

Get Yours Today! @ **Ksh 1,500**

 TgFlow®
Flowable Composite B1

-  Highly polishable with excellent aesthetic properties, achieving a natural finish.
-  High compressive strength and excellent marginal adaptation to prevent leaks and voids.
-  The material has optimal consistency and a "perfect flow" behavior that requires minimal manipulation

Get Yours Today! @ **Ksh 1,000**

parkell MucoSoft® Denture Reline

Denture Reline Kit

- 👍 The flexible silicone formula stays soft over time and does not stiffen with age.
- 👍 Reduces water absorption, which helps prevent common issues like odor and discoloration.
- 👍 The material is odorless and taste-free, with no heat generation during the curing process.

Get Yours Today! @ **Ksh 23,000**

ConsepsisTM IndiSpenseTM

2% Chlorhexidine Antibacterial Solution

- 👍 Effectively cleans and disinfects preparations to minimize postoperative sensitivity.
- 👍 Recommended for procedural endodontic disinfection, final rinsing before obturation, and disinfection prior to pulp capping.
- 👍 Free of emollients and oils that could interfere with bonding strength.

info@transafricamedical.co.ke

+254 706 505 693

PeakTM-ZM

Zirconia and Metal Primer 4M Bottle

- 👍 Contains the MDP monomer, which significantly enhances bond values—up to 5 times stronger than using resin cement alone.
- 👍 Effectively treats zirconia, alumina, titanium, and various other metal alloys.
- 👍 The 4ml bottle is designed for clinicians who prefer traditional dispensing over syringe delivery.

Get Yours Today! @ **Ksh 13,800**

PermaSeal™

Penetrating Composite Sealer

- 👍 Penetrates surface irregularities created during the finishing and polishing process.
- 👍 Especially effective when applied to Class V composite margins to protect marginal integrity.
- 👍 Its low viscosity allows it to cure in an extremely thin film, typically eliminating the need for occlusal adjustments.

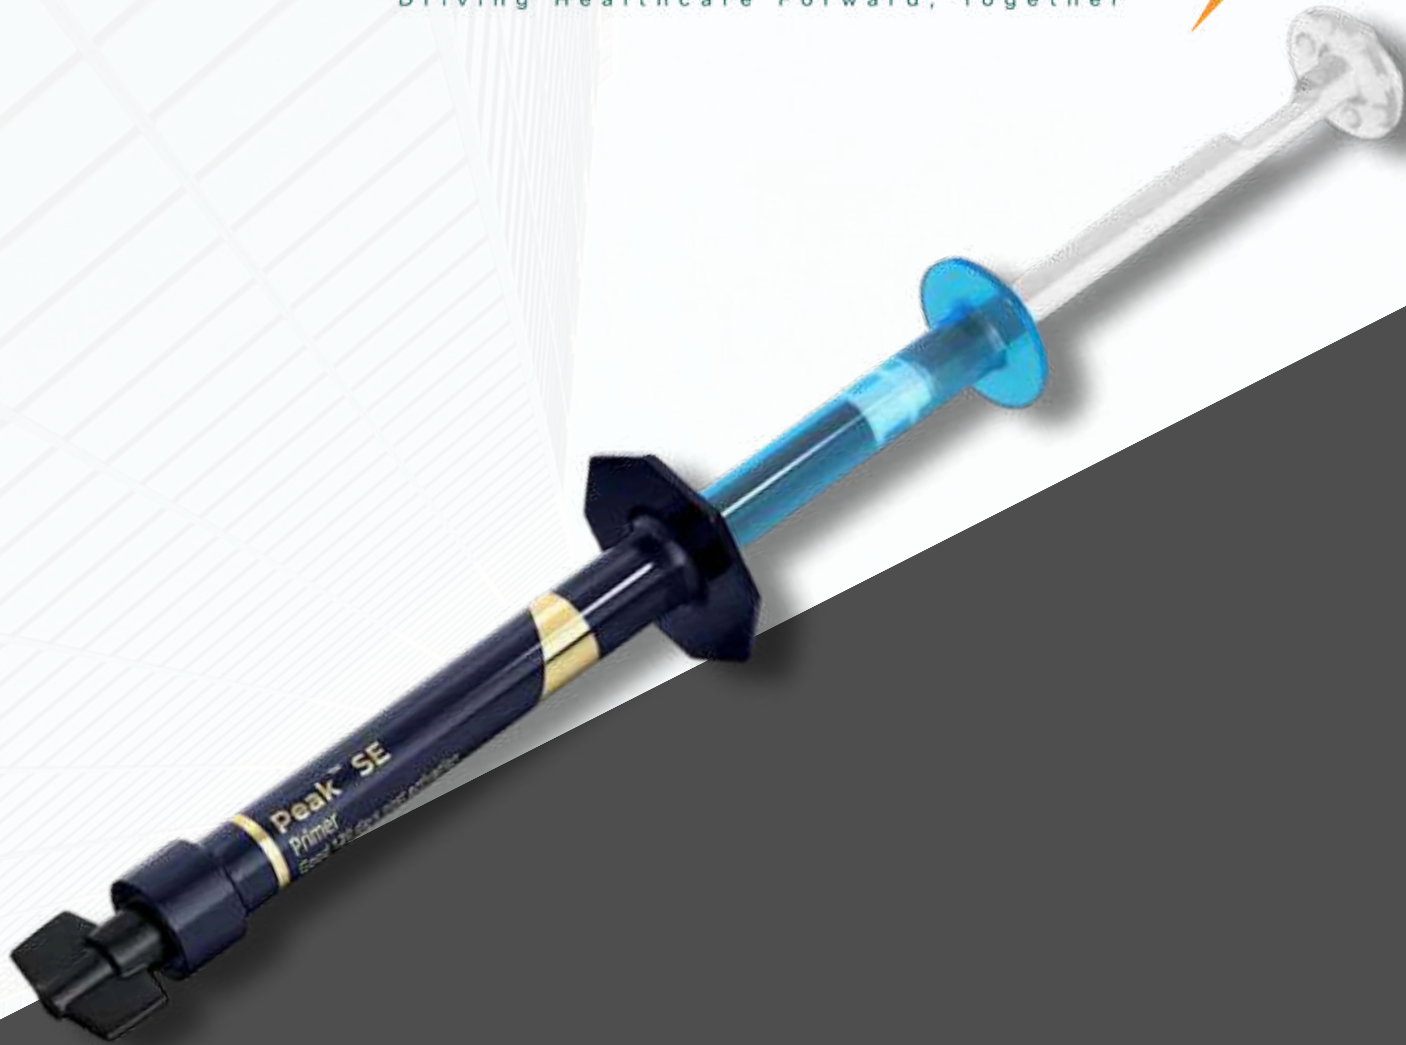

Get Yours Today! @ **Ksh 8,500**

info@transafricamedical.co.ke

+254 706 505 693

Peak™ SE Primer

2% Chlorhexidine Antibacterial Solution

- 👍 Keeps the strong acid (pH 1.2) and priming resin separate until activation, preventing chemical degradation and ensuring fresh chemistry for every use.
- 👍 Once activated, the primer remains stable for 120 days (though some sources mention 30 days).
- 👍 Simplifies workflow by eliminating the need for separate mixing wells or extra etching steps.

Get Yours Today! @ **Ksh 7,000**

info@transafricamedical.co.ke

+254 706 505 693

UltraSeal XTTM plus

Hydrophobic pit and fissure sealant, Shade #A2

- 👍 Resin-based sealants like UltraSeal XT plus have documented retention rates significantly higher than glass ionomer alternatives.
- 👍 Its ability to adapt closely to the tooth surface effectively seals out bacteria.
- 👍 BPA-free and certified gluten-free.
- 👍 The delivery system allows for bubble-free, drip-free application even in difficult-to-access areas.

M3-Pro Gold is a series of multiple sequence files manufactured with the most advanced metallurgy technology. The gold heat treatment enhances the flexibility and resistance to cyclic fatigue. Its convex triangular cross-section increases the cutting efficiency while preserving dentin. It can cover 95% of clinical cases, including curved canals. We have 3 versions to adapt to the usage habits of different dentists.

Design

Markings for easy instrument identification The number of rings on the handle indicates the instrument's taper size:
e. g. 2 rings = taper .06

The ISO Color Coding

Indicates the size of the instrument tip:
e. g. Red ISO 25 = $\phi 0.25\text{mm}$

Calibrated Length Marking

Easy indication of working length during preparation:
e. g. a M3-Pro Gold 25/.06 with a working length of 25mm has depth markings at 18, 19, 20 and 22 mm, starting from the instrument tip.

Gold Heat Treatment
Enhances Cutting Efficiency

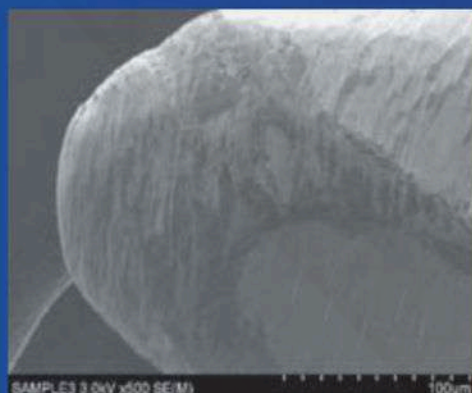

Convex Triangular Cross-section
Sharp Cutting Edges

Suitable for all canals
Can shape any canal

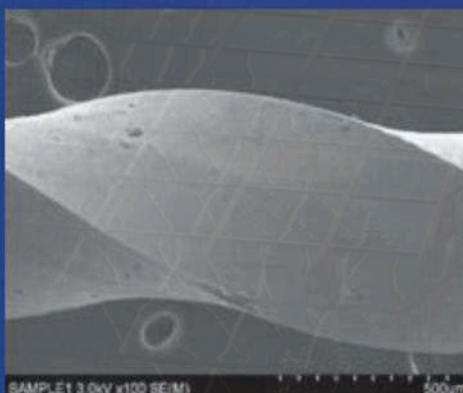

Safe non-cutting tip
minimises the risk of ledge formation and enhances the debris removal

TransafricaMedical 
Driving Healthcare Forward, Together

Non-cutting Tip

The non-cutting tip design allows each instrument to safely follow the secured portion of the canal while the small flat area on the tip enhances its ability to find its way through soft tissue and debris.

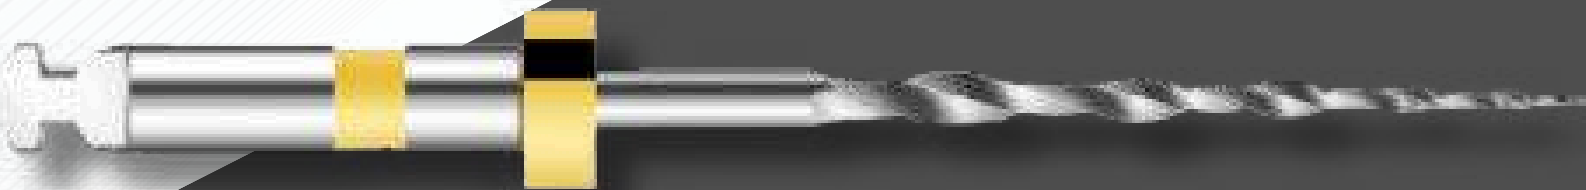

High Flexibility

M3-Pro Gold proprietary processing allows it to follow canal curvature. As such, the file may retain the shape of the canal upon removal. This is normal. The file can be easily straightened or further curved.

Polishing Technique

Advanced triple polishing technique, Eliminate stress point on the surface.

 Bondent™ M3 RT (Retreatment)
For efficient removal of obturation materials

- 👍 Sequential Removal: Three files specifically sized for coronal, middle, and apical thirds.
- 👍 Operates reliably at 350 RPM and 2.0 Ncm torque.
- 👍 Active Cutting Tip: Designed to efficiently "bite" into and remove hardened gutta-percha.
- 👍 Stepwise Design: Clears material in stages to prevent pushing debris past the apex.

Get Yours Today! @ **Ksh 2,200**

M3 Flash Files

High-speed rotary system designed for canal preparation.

-  Gold Heat Treatment: Provides the flexibility needed to follow canal curves while maintaining high cutting efficiency.
-  Designed to effectively "flash"/ lift debris out of the canal quickly.
-  Two-File System: Allows most canals to be shaped using only two files, significantly reducing chair time.
-  Variable Taper: Optimized to provide a conservative preparation that preserves natural tooth structure

+254 706 505 693

M3-L Platinum V.EU

Features:

Safe and efficient rotary file system

Bondent presents its patented cross-section with flat design: the perfect union of cutting efficiency and debris removal.

STERILE

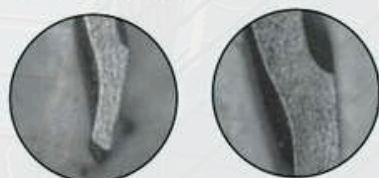

The patented cross section:

1. Reduces the risk of instrument separations
2. Increases the efficacy of circumferential brushing movements for efficient selective cleaning

Flat design: more space

1. For improved debris removal
2. To reduce stress on the instrument

Increases lateral space at the apex and reduces debris being pushed into the periapical area

Short Shaft 11mm

@ **Ksh 2,900**

Working length

Working length: 21 mm, 25 mm, 31 mm
Depth markings at: 18, 19 and 20mm, 18, 19, 20 and 22mm, 22 and 24mm

NEW

 **DÜRRTM
DENTAL** **Orotol plus**
Suction Line Disinfectants

- 👍 Effective against bacteria (including TB), yeast, and viruses (HBV, HCV, HIV, and non-enveloped viruses like Adeno and Noro).
- 👍 Only a 2% concentration, 20ml per 1 liter of water is required daily.
- 👍 Biofilm Removal: Specifically formulated to dissolve biofilm and prevent sludge buildup from blood and proteins.
- 👍 Material Safety: Non-corrosive, aldehyde-free formula that is certified safe for all major dental units.

Get Yours Today! @ **Ksh 9,150**

OroCup Care System

Disinfection of dental suction units and amalgam separators

- 👍 Superior Cleaning: Creates an air-water mixture that ensures the solution reaches every surface for total biofilm removal.
- 👍 Integrated adapters for all standard suction hose sizes.
- 👍 Time-Saving: The system automatically aspirates the disinfectant, allowing staff to walk away and perform other duties.
- 👍 Clear measurement markings ensure the perfect mixing ratio, preventing chemical waste and ensuring efficacy.

 **DÜRR DENTAL™ ID 213**

Fully virucidal concentrate for disinfecting surgical, and rotating instruments

- 👍 Total Protection: Fully virucidal effect that kills bacteria, fungi, and all viruses (including HBV, HCV, and HIV).
- 👍 Highly economical with an active working life of up to 14 days.
- 👍 Deep Cleaning: Highly effective formula that dissolves stubborn organic contaminants and blood.
- 👍 Material Safe: Contains corrosion inhibitors to protect sensitive instruments and burs.

Get Yours Today! @ **Ksh 10,850**

 WOODPECKER i-Sensor[®]
High-resolution intraoral digital X-ray sensor

- 👍 High Resolution: 25 lp/mm theoretical resolution for sharp diagnostic detail.
- 👍 Durable: IP68 waterproof rating and reinforced cable tested for 80,000+ bends.
- 👍 Ultra-Thin: Only 4.4 mm thick with rounded corners
- 👍 Software: Includes Ai Dental software with a TWAIN driver for easy integration with third-party systems.

Get Yours Today! @ **Ksh 220k**

Lead Apron

Block scatter radiation during X-ray procedures

- 👍 Protection: Shields vital organs with 0.25mm or 0.5mm lead (or lead-free) equivalency.
- 👍 Thyroid Collar: Often included to protect the radiation-sensitive thyroid gland.
- 👍 Wipeable vinyl or nylon surfaces for infection control.
- 👍 Styles: Available in lap (seated), full-body, or wrap-around (panoramic) designs.

Get Yours Today! @ **Ksh 35,000**

Thyroid lead Collar

Protect the radiation-sensitive thyroid gland

- 👍 Protection: Provides 0.25mm or 0.5mm lead (Pb) equivalency to block scatter radiation.
- 👍 Design: Ergonomic wrap-around shape with a Velcro closure for a snug, adjustable fit.
- 👍 Encased in wipeable vinyl or nylon for easy disinfection.
- 👍 Usage: Can be integrated into a full apron or used as a separate, standalone unit.

Get Yours Today! @ **Ksh 7,000**

 DÜRR DENTAL Tornado 1

Oil-free compressor for a single dental workstation.

- 👍 **Ultra-Quiet:** Operates at 64 dB(A) (down to 54 dB(A) with an optional hood).
- 👍 **Hygiene:** Antibacterial tank lining and oil-free operation ensure clean, dry air for dental composites.
- 👍 **Performance:** Delivers 67 l/min at 5 bar with a 20L tank.
- 👍 **Efficiency:** Features a low-maintenance design and reduces energy consumption by roughly 15%.

Get Yours Today! @ **On Request**

 DÜRR DENTAL Tornado 2

Two-cylinder compressor to support two dental units

- 👍 Performance: Higher delivery rate of 125–140 l/min at 5 bar compared to the Tornado 1.
- 👍 Quiet Operation: Standard noise level is 68 dB(A), but an optional aerodynamic hood can reduce this to 54–56 dB(A).
- 👍 Capacity: Uses a 2-cylinder aggregate with a 20-litre tank.
- 👍 Features oil-free operation, an antibacterial internal tank lining, and typically requires only an annual filter change.

Get Yours Today! @ **On Request**

 Tornado 4

Four-cylinder compressor supporting up to four dental workstations

- 👍 Tank Capacity: Features a large 50-litre tank to handle the demands of four users.
- 👍 Standard noise level is around 70 dB(A). With the optional aerodynamic noise reduction hood, it is as quietly as 54–56 dB(A).
- 👍 Delivers a flow rate of approximately 205–230 l/min at 5 bar.
- 👍 Maintenance: Low-maintenance design generally requiring only an annual filter change.

Get Yours Today! @ **On Request**

Run with safety – Dental Compressed Air from Dürr Dental

For over 65 years, compressed-air systems from Dürr Dental have been used extensively in practices and clinics around the world. Their superb performance and air quality – oil-free, dry, hygienic – has made them market leaders. Dürr Dental compressors are also certified as Class IIa medical devices in accordance with the MDR (EU 2017/745).

Tornado 2

Perfect for 2 dental units: Compressor with 2 cylinders and 20 liters of compressed air capacity.

Tornado 1

Optimal for one dental unit:
The single-cylinder compressor with a 20-liter compressed air tank.

Tornado 4

Designed for high performance and four dental units: The twin compressor with 4 cylinders and a 50-liter compressed air tank.

THE Graft™ Granules

Natural porcine-derived bone mineral matrix for bone regeneration.

- 👍 Interconnected Porosity: High-volume macro and micropores allow rapid blood vessel growth and cell migration throughout the graft.
- 👍 Optimal Hydrophilicity: Naturally "wetable" surface absorbs blood and proteins instantly to start the healing process.
- 👍 Mimetic: Chemically and physically similar to human bone.
- 👍 100% porcine-derived bone mineral with all organic components removed to prevent immune reactions.

Get Yours Today! @ **Ksh 7,000**

OpenTex[®]-TR
Titanium Reinforced

Non-resorbable PTFE barrier membrane used in GBR

- 👍 Microporous: Small pore size ($<1\mu\text{m}$) blocks bacteria but allows fluid circulation.
- 👍 Easy Removal: Its smooth surface prevents tissue ingrowth, making it easy to pull after healing
- 👍 100% PTFE: Medical-grade, biologically inert, and non-reactive.
- 👍 Exposed Healing: Can withstand exposure in the oral cavity without infection risk.

Get Yours Today! @ **Ksh 15,800**

THE Cover™

Resorbable collagen membrane made from porcine Type I collagen.

- 👍 Resorbable: Dissolves naturally over 3–6 months; no removal surgery.
- 👍 Dual Texture: Smooth side prevents soft tissue growth; porous side aids bone cells.
- 👍 Becomes extremely flexible when wet for easy contouring.
- 👍 No Cross-linking: Uses "Self-Assembly Technology" to maximize safety and healing.

EXCLUSIVE PARTNERSHIP ANNOUNCEMENT

Introducing the blue^m Oral Care Catalog: Now Exclusively at Transafrica Medical Supplies

Transafrica Medical Supplies Limited has recently been appointed the **exclusive authorized dealer for blue^m in Kenya**. Founded by a team of dental surgeons led by Dr. Peter Blijdorp in the Netherlands, **blue^m** is an award-winning, premium oral care brand — celebrated globally for revolutionizing periodontics, implantology, and daily hygiene through the power of **active oxygen therapy**.

Through this exclusive partnership, Kenyan dental clinics, maxillofacial surgeries, and premium pharmacies can now access the full clinical-grade **blue^m Product Portfolio** — including oxygen-enriched professional mouthwashes, specialized implant toothpastes, oral gels, and targeted post-surgical hygiene kits.

Advanced Oxygen Therapy — Now Available in Kenya · Powered by natural oxygen-releasing structures, honey-derived enzymes and xylitol

The Power of Oxygen Therapy

vs. Traditional Mouthwashes

A clinical comparison — why oxygen wins

TRADITIONAL MOUTHWASHES

Rely heavily on **harsh chemical antiseptics, alcohol, or chlorhexidine (CHX)** to eliminate oral bacteria. While effective at killing pathogens, these options create **significant clinical side effects** over long-term use including staining, taste alteration, and microbiome disruption

blue^m ACTIVE OXYGEN

Offers unique **biological and therapeutic advantages** through sustained active oxygen release. Targets only harmful anaerobic bacteria while **preserving the healthy oral microbiome** — entirely non-staining, alcohol-free, and biocompatible

5 CLINICAL ADVANTAGES OF blue^m ACTIVE OXYGEN

Targeted Elimination of Anaerobic Bacteria

- 01** Pathogenic bacteria responsible for periodontitis, peri-implantitis, and bad breath are strictly anaerobic (cannot survive in oxygen). Active oxygen directly eradicates these harmful strains while preserving the healthy, aerobic oral microbiome.

Accelerated Wound Healing

- 02** Oxygen is the vital fuel required for cellular metabolism and tissue regeneration. The sustained release of active oxygen stimulates neovascularization (new blood vessel growth) and speeds up tissue repair — highly effective after oral surgeries, extractions, or implant placements.

Deep Biofilm Penetration

- 03** Studies demonstrate that active oxygen effectively breaks down the protective matrix of organic oral biofilm. It clears plaque from deep periodontal pockets and complex multi-microscopic structures where standard rinses cannot easily reach

No Teeth Staining or Taste Alterations

- 04** Traditional chlorhexidine mouthwashes brown the teeth and alter patient taste buds when used for more than two weeks. The blue^m oxygen formula is entirely non-staining, lacks alcohol, and maintains long-term patient compliance.

Biocompatible and Non-Toxic

- 05** Free from toxic synthetic compounds, the formula utilizes natural oxygen-releasing structures combined with honeyderived enzymes (glucose oxidase), lactoferrin, and xylitol — perfectly safe for daily, long-term oral care.

500 ml

blue^m Mouthwash[®]

uses active oxygen to heal gums, protect implants, and kill bad bacteria

- 👍 Accelerates Healing: Active oxygen significantly speeds up soft tissue recovery after implant surgery, extractions, or oral wounds.
- 👍 Contains zero alcohol, eliminating the stinging sensation or mucous membrane dryness common in traditional rinses.
- 👍 Heals fast: Speeds up recovery after dental surgeries.
- 👍 Implant Safe: Free of fluoride, preventing the corrosion or embrittlement of titanium dental implants.

Get Yours Today! @ **Ksh 2,500**

250 ml

blue^m Mouthwash[®]

uses active oxygen to heal gums, protect implants, and kill bad bacteria

- 👍 Accelerates Healing: Active oxygen significantly speeds up soft tissue recovery after implant surgery, extractions, or oral wounds.
- 👍 Contains zero alcohol, eliminating the stinging sensation or mucous membrane dryness common in traditional rinses.
- 👍 Heals fast: Speeds up recovery after dental surgeries.
- 👍 Implant Safe: Free of fluoride, preventing the corrosion or embrittlement of titanium dental implants.

Get Yours Today! @ **Ksh 1,500**

blue^m Oralform[®]

waterless, on-the-go alternative to mouthwash.

- 👍 Appliance Cleaner: Fast, non-abrasive disinfection for clear aligners, Invisalign, braces, night guards, and dentures.
- 👍 Biofilm Elimination: Destroys trapped bacteria and plaque inside dental trays to prevent bad odors.
- 👍 Optimized for orthodontic appliances and fast oral hygiene
- 👍 Mucosa Conditioning: Soothes and heals sensitive oral tissues, mouth ulcers, and gums.

Get Yours Today! @

Ksh 1,200

ORAL FOAM

When wearing orthodontic appliances like clear aligners, retainers and fixed braces

Bruxists (people who grind teeth) wearing night guards

Athletes wearing protective mouthguards

To combat poor breath or dry mouth

Post-oral surgery

When to Use

To clean orthodontic appliances and dentures, apply foam directly, ensuring even coverage. Place in your mouth, spit out excess foam, and use a soft toothbrush if needed. Apply foam to appliances not in use, leaving it overnight for a safe, chemical-free clean. Follow professional directions for appliance wear and specific instructions for oral hygiene, especially for fixed braces

blue^m Oral Gel

A concentrated, targeted topical medical device

- 👍 Fast-tracks recovery: Speeds up tissue cell growth after extractions, implant placements, or oral surgeries.
- 👍 Deep disinfection: Safely penetrates deep periodontal pockets to reduce pocket depth and eliminate bad bacteria.
- 👍 highest levels of active oxygen to deliver rapid healing.
- 👍 Soothes irritation: Calms bleeding gums and targets painful sores caused by dentures, chemotherapy, or braces

Get Yours Today! @ **Ksh 3,300**

blue[®]m Oxygen Fluid[®]

High-oxygen rinse for severe oral trauma and sensitive mouths

- 👍 Heals fast: Speeds up recovery from surgery, extractions, and chemo sores.
- 👍 Prevents infection: Destroys harmful bacteria without damaging the oral microbiome.
- 👍 Zero sting: Free of mint, flavors, and colors to prevent burning.
- 👍 Implant safe: Alcohol and fluoride-free formula prevents tissue dryness.

Get Yours Today! @ **Ksh 1,800**

blue^m Oxygen Fluid[®]

High-oxygen rinse for severe oral trauma and sensitive mouths

- 👍 Heals fast: Speeds up recovery from surgery, extractions, and chemo sores.
- 👍 Prevents infection: Destroys harmful bacteria without damaging the oral microbiome.

RDA |

Relative dentin abrasivity

The toothpastes on the market have an RDA between 50 and 250, and the higher the RDA, the more abrasive the toothpaste. A toothpaste with a lower RDA value is desirable, thus being less abrasive and producing less damage to tooth enamel.

blue^m Implant Care Kit

A complete, all-in-one postsurgical Box

- 👍 Prevents peri-implantitis: Eliminates harmful anaerobic bacteria to prevent dangerous infections around the new implant.
- 👍 Protects implant materials: The entire box is 100% fluoride-free, avoiding chemical reactions with titanium surfaces.
- 👍 Active oxygen accelerates tissue healing at the wound site.
- 👍 Minimizes swelling and pain: The combined properties of the fluid, gel, and cool pack reduce oral irritation.

Get Yours Today! @ **Ksh 6,400**

blue^m Day-to-Day Toothbrush[®]

Single Blister Pack

- 👍 Safeguards implants: Gentle bristles clean effectively without scratching titanium or ceramic crowns.
- 👍 Safeguards implants: Gentle bristles clean effectively without scratching titanium or ceramic crowns.
- 👍 Ultra-soft bristles shield healing surgical sites and stitches.
- 👍 Hygienic packaging: Sealed single blister pack keeps the brush completely sterile until opening.

Get Yours Today! @ **Ksh 650**

blue[®]m Oral gel 3by3ml box[®]

box of pre-filled oral gel syringes (3x 3ml)

- 👍 Accelerates surgical healing: High-dose active oxygen triggers rapid tissue cell regeneration at wound and suture sites.
- 👍 Precise clinical application: Syringe design permits direct delivery into deep periodontal pockets or hard-to-reach surgical gaps.
- 👍 Thick gel clings firmly to tissues, working for up to an hour.
- 👍 Selectively eliminates anaerobic bacteria to prevent infections like peri-implantitis and periodontitis.
